Viivi Uhari

I am a dedicated and organized problem-solver with technical skills gained through professional experience, personal projects and my MSc (Tech) majoring in HCI. I have an energetic and positive personality and strong social skills, reflected in my experiences living abroad and working with diverse stakeholders. I am passionate about user-centered design, software and data engineering as well as building humane solutions and a more sustainable world.

EDUCATION | Aalto University

Master of Science (Technology) | 8/2023 – 12/2025

Major: Human-Computer Interaction
Minor: Computer Science – Web Technologies, Applications, and Science

Bachelor of Science (Technology) | Tutor | 8/2020 – 7/2023

Major: Computer Science
Minor: Information Networks

PROJECTS PORTFOLIO: viiviuhari.fi

My experience in full stack and frontend development, as well as UI design, comes from personal and study projects. The site above, developed with Next.js, showcases these projects, including projects incorporating LLMs.

JavaScript • React • CSS • Node.js • PostgreSQL • Docker • Flutter, Dart

WORK EXPERIENCE

Research Assistant

Aalto University | Thesis | 3/2025 – 8/2025

Worked on my master's thesis investigating the impact of social media push notifications on wellbeing. Designed and completed a study, which included restricting participants' notifications for two weeks. Measured their wellbeing using questionnaires and social media activity using user data that social media platforms are required to provide upon request under GDPR, also known as *data donations*. Participants were also interviewed.

Data donations required extensive data processing to define a data structure that exposed meaningful insights, as the data lacked uniformity and documentation. Combined it with wellbeing data. Used Python, Pandas, SciPy, Statsmodels and Seaborn for quantitative data analysis, and GitHub Copilot to expedite implementation. Design decisions regarding data modeling, code architecture and data analysis were made without AI. Created visualizations in Excel and analyzed interviews with MAXQDA.

Worked within a research group that held biweekly meetings to provide feedback to one another, while my research was independent. Gained experience with the regulatory requirements involved in conducting ethical research. The study results showed an increase in mindfulness and searching on social media within the group receiving fewer notifications (treatment).

Python • Pandas • Data Analysis • GitHub Copilot • MAXQDA • Excel

SKILLS

Full Stack

- React
- JavaScript, TypeScript
- Next.js
- Node.js
- CSS
- PostgreSQL
- Docker

Software Engineering

- Python
- Scala, Java
- AWS
- Terraform

Data Engineering

- Spark, SQL
- Databricks

Development Tools

- Git, GitHub
- Jira, Trello
- Claude, GitHub Copilot

UI/UX Design

- Figma

Languages

- Finnish: Native
- English: Fluent
- Swedish: Satisfactory
- Spanish: Moderate

WORK EXPERIENCE

Data Engineer, Summer Trainee

Fortum Oyj | 5/2023 – 8/2023

Continued as a data engineer in the same DevOps team developing Asset Data Platform as the previous summer. Executed similar tasks while focusing more on building the platform's Databricks infrastructure. Worked on transforming to Unity Catalog, including configuring Service Principals, user groups and tokens, with connections to AWS services such as IAM. Used Terraform and Databricks CLI for the setup, and the delivery was time-sensitive to enable proper data access for a data scientist customer. Helped junior and senior engineers as the technologies became familiar.

Migrated legacy data and developed a pipeline for continuously incoming weather data, working independently with a data scientist to meet their needs while the rest of the team was away. Developed a Scala/Spark SQL Databricks notebook, configured Databricks Jobs and Clusters, and set up the required permissions. This also led me to notice, fix and document an error in our archiving pipeline.

Python • Scala • Spark • Databricks • AWS • Terraform • Jira • GitHub

Data Engineer, Summer Trainee

Fortum Oyj | 5/2022 – 8/2022

Worked as a data engineer in a DevOps team developing the Asset Data Platform, an internal data platform supporting the automated intake, processing, integration and management of energy production data. Worked on various tasks as the team relied on me to pick up new responsibilities and complete them independently, asking only critical questions.

Developed a data processing library using Scala, Spark SQL and YAML, being one of the few who knew Scala. Configured and tested new data pipelines, for example, a Databricks notebook utilizing Python and PySpark to process wind turbine data between AWS S3 buckets. Updated and maintained existing pipelines, including setting up AWS Lambdas, SNS topics and a DynamoDB database with Terraform. Fixed bugs and updated documentation. Got familiar with Git, GitHub, Jira, Confluence and other practices of our Kanban-esque agile approach. Improved our development tools, such as setting up Git hooks.

Python • Scala • Spark • Databricks • AWS • Terraform • Jira • GitHub

Yard Work Trainee

TA-Asumisoikeus Oy | 7/2021 – 8/2021

Maintained outdoor areas of TA buildings by pruning shrubs, removing weeds and ensuring overall cleanliness. Worked in a team of four. Was praised by the supervisor for leadership potential.

Efficiency • Teamwork • Persistence • Attention to Detail • Coordination

Cleaner

Wash palvelut Ky | 5/2020 – 7/2020

Carried out post-construction cleaning, as well as routine cleaning in schools, offices and residential buildings. Worked with a partner and independently.

Attention to Detail • Adaptability • Independent Working • Tme Management
